FIVE WORLDS. ONE TOOL.

Inside: the structure visible in the finished reel, five fresh starting prompts, and a checklist for making your own version. These prompts recreate the approach. They are not claimed to be the original prompts.

A dashboard, a record, a game, a made-up brand and a paper-cut story. The reel presents them as work made with Claude Code.

Lume is a fictional brand. The figures on its dashboard and game are display content, not real results.

ONE IDEA, FIVE FORMS

The opening says “All of this. One tool. Claude Code.” A code-like prompt bar connects the scenes. Each world gets a distinct visual language before the edit pulls back to show them together.

01	**Dashboard:** a dark prompt view opens into a pale waitlist dashboard with a ring, large count and activity cards.
02	**Record:** Lume appears on a spinning vinyl label. Type and color hit with the rhythm.
03	**Game:** a side-scrolling platform scene, score, combo and neon accents.
04	**Brand:** the made-up Lume name, an orbital mark and a bright identity screen.
05	**Story:** a layered paper night with houses, trees, a path and a moon face.

> **Final reveal:** the worlds appear as strips on an editing timeline. The closing card reads “Five worlds. five prompts.” and “One tool. Claude Code.”

BUILD YOUR WORLDS

Use these as new briefs for your own reel. Replace Lume and every display value. Review the storyboard before building the full sequence.

CLAUDE CODE / FIVE SCENE BRIEFS

```
1. DASHBOARD: Build a fictional waitlist dashboard in a vertical frame.
Begin with a short code-like request and reveal a clean light interface:
progress ring, large sign-up count, small activity cards. Use clearly
fictional sample data.

2. RECORD: Build a spinning vinyl scene for a fictional music label. Put
its name on the record, then make large type and the record change color
on musical hits. Keep the label readable.

3. GAME: Build a short side-scrolling platform game scene. Show a
character moving through obstacles with an on-screen score and combo.
Make the score clearly part of the game world.

4. BRAND: Create an original identity for a fictional brand. Build one
simple symbol that can rotate and resolve into a bold name card. Avoid
real brand marks.

5. PAPER STORY: Build a night scene from flat paper layers: houses,
trees, mountains, a winding path and a moon character. Separate the
layers with light and shadows so the camera can move through them.
```

MAKE THE REVEAL COUNT

- **Give each world a different task.** The dashboard explains, the record plays, the game responds, the brand resolves, and the paper scene tells a story.
- **Keep one visual link.** Reuse a small prompt bar or project mark so viewers understand that the worlds belong to one showreel.
- **Show the work together.** Pull back to an editing timeline or contact sheet before the final claim. The reel uses a timeline with each scene visible.
- **Use one clear closing line.** Name the worlds and the tool. Keep it readable on a phone.
- **Check every invented value.** Lume and the dashboard figures are fictional. Label your own demo data honestly and remove any claim that sounds like a client result.

> **Source limit:** the finished video, a frame sheet, a cover and caption were available. The original scene code and exact five prompts were not found in the supplied working folder. This guide describes what can be checked in the reel; its prompts are newly written starting points.

START WITH A STORYBOARD

Ask Claude Code for one real frame from each world and the final reveal. Approve the visual direction before rendering the full reel.
