Fly softer.

How I made a 15-second airline ad where you see the whole booking: search, a city, a date, a seat, “Booked”. Then the boarding pass tears and folds into a paper plane. Every cut is on the beat. No editing app. The full brief, ready to paste. Windows and Mac.

What you get

An ad that sells a product by showing it working. Claude builds the interface, the cursor, the transitions, the paper plane and the music. You bring a few photos and your brand.

15
SECONDS, CUT ON EVERY BEAT

3
TAPS FROM SEARCH TO TICKET

7
WORLDS, ONE PER SCENE

1
TICKET THAT BECOMES A PLANE

What you need

- A Windows 10/11 or macOS computer.
- A Claude plan that includes Claude Code.
- 6 to 8 photos from Pinterest (the list is in step 03). Reel Studio does not include them. Minimum 1080 x 1920 px each, vertical, saved as `window.jpg`, `sky.jpg` and `city-1.jpg` to `city-5.jpg`. Only use photos you may use; the Instrument Serif and Geist font files are not included either.

Why it works

01 · A question
“The best part of your trip?” The viewer answers in their head and stays

02 · The product
The whole booking happens on screen with a cursor. People see how easy it is instead of being told

03 · Benefits on the beat
“Any day.” “Every seat is a window.” “Booked in 3 taps.” One per scene, never a list

04 · A turn
The ticket tears and becomes a paper plane. The thing you bought is the thing that flies

05 · The why
“Because the flight is part of the trip.” Then the tagline

The one trick behind it

Nothing fades. The cloud becomes the search bar, the card flips into the calendar, the days fly into seats, the button becomes the ring, the ring opens into the city, the stub folds into the plane. The eye always has one thing to follow, so the cuts feel fast but never lost.

Reel Studio buyers: skip this section. The folder name, the install and the first Claude launch below are the steps I took when I built this reel on a clean computer. You already work in `My-Reel-Studio`, so open it and start from `FIRST-REEL.md`.

Install the tools

1 Open a terminal

WINDOWS Press Win, type `PowerShell`, open it.

MAC Press Cmd + Space, type `Terminal`, open it.

2 Node.js, Git, Python and ffmpeg

WINDOWS Paste one line at a time. Answer `Y` when asked.

POWERSHELL

```
winget install -e --id OpenJS.NodeJS.LTS
winget install -e --id Git.Git
winget install -e --id Python.Python.3.13
winget install -e --id Gyan.FFmpeg
```

MAC Homebrew first, it will ask for your password. At the end it prints two lines under “Next steps”: run them, then run the second command.

TERMINAL · STEP 1

```
/bin/bash -c "$(curl -fsSL
https://raw.githubusercontent.com/Homebrew/install/HEAD/ins
tall.sh)"
```

TERMINAL · STEP 2

```
brew install node git python ffmpeg
```

> **Important.** Close the terminal and open it again after installing, or it will not see the new programs.

3 Claude Code

TERMINAL

```
npm install -g @anthropic-ai/claude-code
```

Prefer an app to a terminal? Install Claude from claude.ai/download, it has a Code tab that does the same thing.

Folder and photos

1 Create a folder and start Claude

TERMINAL

```
mkdir fly-ad
cd fly-ad
claude
```

2 Setup

PROMPT · SETUP

```
Set up a motion project in this folder.

1. Install Remotion (React 18 + TypeScript).
2. Check that Python has numpy, scipy and soundfile. Install
what is missing.
3. Check that ffmpeg works from the terminal.
4. Make a folder public/photos. I will put my background
photos there.
5. Build a test composition, 1080x1920, 30 fps: one of my
photos as a full-screen background and on top of it a frosted
glass card (backdrop blur, a thin white border, a soft shadow)
with one line of text in an italic serif. Render one frame to
PNG and show me the path.

If something is missing, install it yourself and tell me what
you installed. If something fails, find the cause and fix it.
```

3 Photos

YOUR SHOPPING LIST

```
Find on Pinterest (add "photography" or "wallpaper" to the
search, not "poster"), vertical, no text, no logos, no
watermarks:
- an airplane window from inside, with clouds outside
- a bright blue sky with soft white clouds
- exactly 5 cities at golden hour (I used New York, Bali, the
Colosseum, the Taj Mahal and a Chinese pagoda)
That makes seven pictures in total: window.jpg, sky.jpg and
city-1.jpg to city-5.jpg, each at least 1080 x 1920 px, from
sources you may use. Put them in public/photos, show me a
contact sheet and reject any with text, logos, watermarks or
mismatched cities before the storyboard. Only backgrounds are
photos. Everything else in the reel is code.
```

Why photos. My first versions drew the sky, clouds and cities in code. They looked like an illustration, not an ad. A real photo behind glass is what makes it look expensive.

The ad brief

Words in square brackets are mine: put your own brand, tagline and benefits.

● PROMPT · AD BRIEF

```
Build a vertical ad for a made-up airline in Remotion.
1080x1920, 30 fps, 15 seconds. All text in English. Keep text
out of the top 220 px and the bottom 380 px (the Instagram
interface).

THE BRAND
[Aurelle]. Tagline: [Fly softer.] The idea: the flight is part
of the trip, not the boring bit before it.

THE RHYTHM
120 BPM: one beat = 15 frames. Every cut lands on a beat. No
shot stays longer than about 1.5 seconds. The camera never
stands still: a tiny punch-in on every beat (scale 1.0 to
1.012 and back, no shake).

THE RULE FOR TRANSITIONS
No crossfades. Every transition is an element of one scene
turning into the next scene, so the eye always has something
to follow. Each scene also has its own background world: grey
cabin, blue sky, vanilla, soft blue, warm cream, blurred city,
sky again.

THE STORY (show the whole booking, like a real app, with a
mouse cursor)
1. HOOK (0-1 s). The airplane window photo. Italic serif in
burgundy: [The best part / of your trip?] The camera rushes
into the window with a speed ramp and blur on the photo only.
2. SEARCH (1-2 s). A white cloud in the sky photo shrinks into
a frosted glass search bar. The cursor clicks it and types
[New York], then clicks "Search".
3. CITY (2-3.5 s). The bar slides up and becomes a header, a
vanilla background rises from below. A cover-flow carousel of
my city photos whips in with horizontal motion blur and lands
on New York. Click. A dark pill pops up: "Selected" with a
```

check.
4. DATE (3.5-4.5 s). The New York card flips in 3D. Its back is a glass calendar for October. Headline [Any day.] Click on 25: it fills burgundy, "Selected".
5. SEAT (4.5-6 s). A soft blue background opens as a circle from the 25. The calendar cells fly into the shape of seats in a cabin, and the 25 becomes seat 1A in gold. A small window next to every seat. Headline [Every seat is a window.] Click on 1A: "1A · Window".
6. BOOK (6-7.5 s). A warm sheet slides up: Destination, Date, Seat. Click "Book". The button shrinks into a circle, a ring fills, a check pops. Headline [Booked in 3 taps.]
7. TICKET (7.5-10 s). The circle opens into the New York photo, blurred. A frosted glass boarding pass rises: brand on a burgundy strip, DXB to JFK, date, gate, seat 1A glowing. Headline [Sleep the whole way.] Then the pass TEARS along the perforation, and the stub with the barcode folds itself into a paper plane (animate the corner points of three triangles from the stub rectangle into the plane).
8. FLY (10-12.5 s). The plane cuts a circle into the blur and the sky opens behind it. It loops and the brand name is revealed right behind it, in a huge burgundy italic serif.
9. WHY (12.5-15 s). Small caps [WHY AURELLE?], then [Because the flight / is part of the trip.], then [Fly softer.]

STYLE
Palette: vanilla #F4F1E8, burgundy #9E1B32, ink #14213D, a pale yellow #FEFFAF for selection, plus the photos. Fonts: Instrument Serif italic for headlines, Geist for the interface. Frosted glass with real backdrop blur. A light film grain over everything. No decoration that means nothing: no bubbles, no confetti, no sparkles. No blur and no shake on text: text slides in from behind a mask.

SOUND (synthesize in numpy, no samples)
120 BPM, premium and punchy: a riser for the first second, then a deep kick on every beat, claps on 2 and 4, hats, a warm bass, chord stabs on the cuts. Sounds for everything that happens: key ticks while typing, a whoosh on the carousel, clicks, a two-note chime on "Booked", a paper tear and a paper fold, a big drop when the plane cuts the sky, a breath on "Why", a final chord on the tagline. Master to about -11 LUFS, peak below -1 dBTP.

CHECK BEFORE YOU SAY DONE
1. Render storyboard strips first: 5 real frames per scene, from the code, not mockups.
2. Check that no headline sits on top of the interface and no text is cut by the frame edge.

3. Then the full render with sound. Tell me what you checked and what I should watch for in motion.

How to fix it with notes

Watch the draft on your phone. Then send notes like these. The first four are almost word for word what I wrote while making this ad.

IT LOOKS CHEAP

It looks cheap. Use my photos as backgrounds instead of drawing the sky in code, put frosted glass on top, and remove every decoration that means nothing.

ALL ON ONE BACKGROUND

Everything is on one background. Give every scene its own world: a new background color or photo on every cut.

NO INTENSITY

There is no intensity and the transitions get lost. Cut on every beat, no shot longer than 1.5 seconds, and make each element turn into the next scene instead of fading.

SHOW THE PRODUCT

Show the whole process like a real app: the cursor picks a city, a date, a seat, books, and a ticket comes out. Add the benefits and why this brand.

YOUR OWN BRAND

```
Replace the brand with mine: [name], [tagline], [three
benefits], [destination]. Keep the same rhythm.
```

What broke *for me*

- **It took nine versions.** Skies, globes and cities drawn in code looked cheap. Real photos as backgrounds fixed it.
- **One background is boring.** When the whole ad sat on the same sky, it felt like one long slide. A new world on every cut fixed it.
- **Decoration looks cheap.** Glass bubbles floating around added nothing. They are gone.
- **Fades lose the eye.** Slow crossfades and things flying in from nowhere felt boring. Each element now becomes the next scene.
- **Photos with text.** The best Pinterest finds were posters with words, prices and logos baked in. Look for “photography”, not “poster”. Never remove stock watermarks.
- **Claude cannot hear or see motion.** It checks still frames and numbers. Whether it hits the beat is your job: watch the draft before the final.

Common questions

Can I use a real airline?

For a concept, I would not. Their logo and slogan belong to them, and the style may not match. A made-up brand is free to look exactly how you want.

Will it work for another product?

Yes. Keep the structure: a question, the product used on screen, one benefit per beat, a turn, the why. Swap the booking for your own flow.

The terminal shows a red error. Now what?

Copy it and paste it to Claude with the words “here is the error, fix it and continue”.
